

Changes MD Viewer

In the new version of the Management Drives Viewer we implemented some changes. These are changes that are implemented in the new English and Dutch profile book.

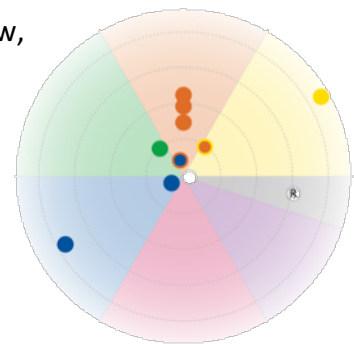

1. Colour-order diversity graph
2. Displaying names beneath the diversity graph
3. New view and print All individual profiles
4. Flag added on the print
5. 'Download app' logo added on the print
6. Performance update

1. Colour-order diversity graph

There is a new colour order for the diversity graph. You may have seen it in the MD Pro and English profile book. The new version of the Viewer will have the new diversity graph also.

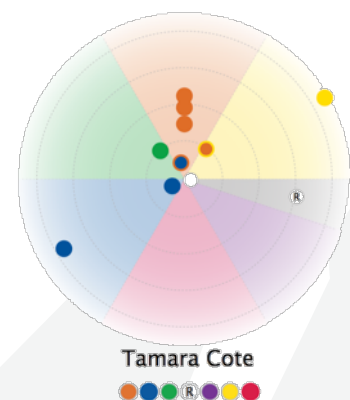

The colours are in accordance with the MD Matrix. The colours Yellow, Green and Orange, at the top of the matrix are also at the top of the graph. The colours Blue, Red and Purple are at the bottom. The graph is completed with the grey part for the participants who have a broad profile or have the R score as first score.

In the grey part participants who have the R as first score are indicated with a R.

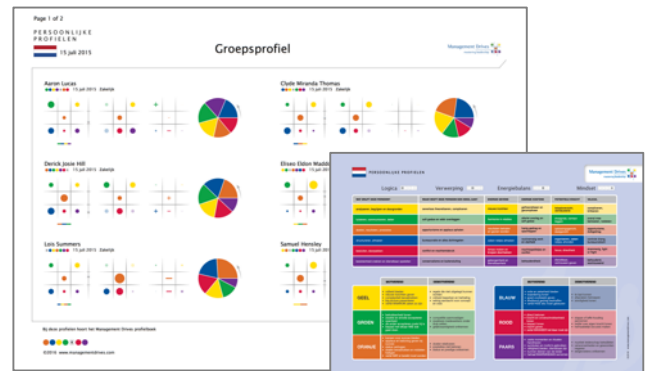

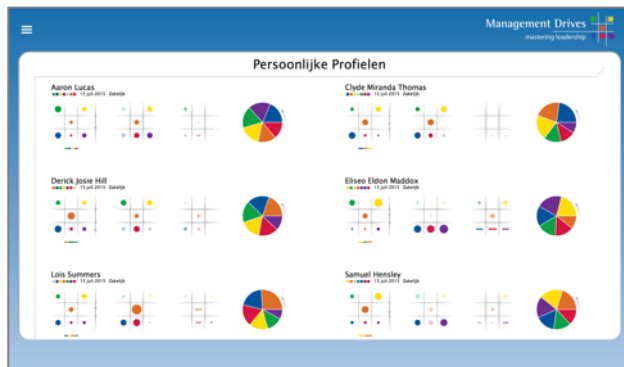

2. Displaying names beneath the diversity graph

Displaying the names in the diversity graph is optimised. The name of the participant is displayed beneath the graph. Furthermore, we added the complete logic sequence.

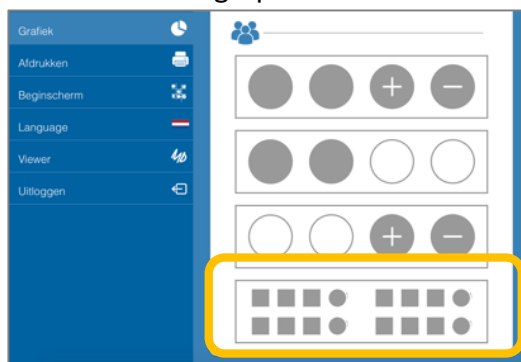

3. New view and print All individual profiles

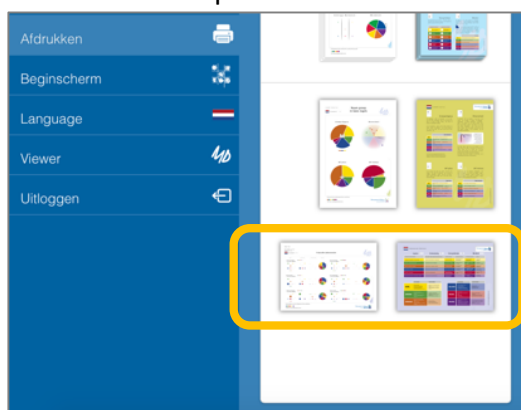

As well as the view as the print for All individual profiles are improved significantly. From now on the complete profiles of the participants are shown, instead of only Logic and Rejection. To fit the new view on the print we changed it from portrait to landscape. The new paper is included with the new English and Dutch profile books.

New icon in the graph menu:

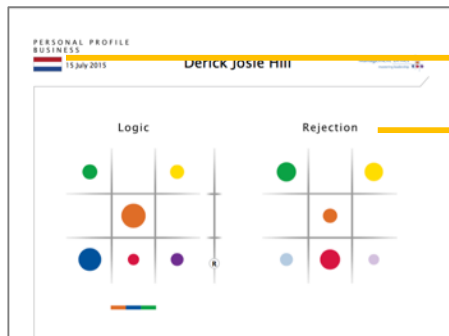

New icon in the print menu:

4. Flag added on the print

All the profile prints will have a new flag. On an individual profile the flag indicates the language which the questionnaire is completed. You are still able to print the profile in the language of your preference.

Flag indicates the language in which the questionnaire is completed

The profile is printed in English

For the Group profile and All individual profiles, the flag indicates the language in which you are printing. There will not be a distinction between the languages in which the participants completed the questionnaires.

5. 'Download app' logo added on the print

We are currently working on an app for everyone who has a Management Drives profile. This means that everyone will be able to view their own profile with the app and read more about it.

When a questionnaire is completed, the participant is able to register for a list to stay tuned for the app release. Therefore, the MD Viewer will also print an icon on the individual profile.

6. Performance update

The way the MD Viewer is retrieving the data is optimised. Retrieving a large list of clusters or loading clusters with a lot of participants could take up a lot of time. With the update we improved the performance of the viewer retrieving this data.

When you use the webviewer (viewer.managementdrives.com) then we recommend you use Google Chrome, Firefox or Safari as internet browser. We experience that Internet Explorer is having difficulties to run the webviewer with large clusters and lists.

Bug fixes

There are some bugs fixed. Thank you for sharing them so we are able to improve the performance of the viewer and give you the best user experience.
